The EPA has stated that it would prefer that the state immediately approve its warm water nutrient criteria—0.067 ppm for TP and 0.88 ppm for TN—but has not yet made these criteria a federal requirement and mandate on the state.

Note: Neither the state's nor the EPA's interim nutrient values can be achieved by any existing technology.

There are different limits and start dates for new wastewater treatment facilities (WWTF) in Regulations 85 and 31, but they will not apply to the three existing wastewater treatment facilities in the OCN coverage area:

- Tri-Lakes WWTF
- Upper Monument Creek Regional WWTF
- Academy Water and Sanitation District's two treatment lagoons

The Reg. 85 nitrogen limit is for total inorganic nitrogen, which is only one component of total nitrogen. The Reg. 85 TIN limit will be easier to meet than the TN limits in the amendment to Reg 31. The actual TIN allowed by the new Reg. 31 TN interim value will be considerably smaller than 2.01 ppm. The interim nutrient values in the Reg. 31 amendment will not generally apply to existing wastewater treatment facilities until 2022, though some exceptions could apply as early as 2017.

Note: The actual chemistry and biological uptake of total phosphorus and total nitrogen in aquatic ecosystems is quite complicated and not well understood—particularly the relationship between total nitrogen and algal growth. This separate controversy was not part of Tamburini's briefing.

Some of the items Tamburini discussed regarding nutrients and their impacts were:

- Total phosphorus consists of numerous inorganic and organic (particulate and dissolved) components.
- Total inorganic nitrogen is composed of ammonia, nitrite, and nitrate.
- The Tri-Lakes facility has always been very effective and efficient in removing ammonia, a toxic chemical.
- There are already nitrate and nitrite drinking water standards.
- Total organic nitrogen is composed of particulate, dissolved, biodegradable, and refractory components.
- The current standard response variable used by regu-
